

National Spatial Data Infrastructure Research Program

Development of open source processing technology for Application of spatial information SW

GeoCMS Installation Manual

GeoCMS Manual	Project classification	Land Spatial Information Research Project
	Project name	GeoCMS

1.1. Business overview

Internationally, the importance of utilizing spatial information is increasing, but the spatial information infrastructure including open source software based on domestic is weak, and the level of practical application of related technology is still low, so it relies on foreign software.

Accordingly, we developed an open source based system for generating and managing new and user-space-based new media space information contents on the web and mobile, gained import substitution effect of foreign-based software, improved technology self-reliance, The goal is to do.

1.2. Business background and necessity

In recent years, services such as Instagram, Vine, and YouTube have emerged as a result of increasing demand for services for various new media space information collected through mobile terminals and for linking with external systems. However, this is a simple media management / service technology, Technology for combined service with information service is very limited.

To solve this problem, it is necessary to provide services for efficient management and service of new media space information that is diversified according to the development of mobile and computing technologies such as Google Glass and panoramic space image. In the case of developing / distributing system in open source form, It is possible to manage users' participation in new media space information in private.

1.3. Business Goals

The ultimate goal is to implement and provide open source spatial information content management system (GeoCMS), which will be utilized by public and private operators and put into practical use.

GeoCMS Manual	Project classification	Land Spatial Information Research Project
	Project name	GeoCMS

- New media space information contents authoring and publishing technology development
- 2) New media space information analysis and service engine technology development
- 3) User-Participated Web / Mobile based Geospatial Content Management System (GeoCMS) technology development
- 4) Development of technology for linking and utilizing public and commercial space information systems

1.4. Benefit

1.4.1. Technical expectation effect

- Overcome the dependency of specific foreign SWs and reduce SW acquisition and maintenance costs
- Enhance technology self-reliance with development of open source software for spatial information led by domestic technology, and successfully commercialize R
 & D results
- Quickly develop and validate high-level SWs to quickly implement products

1.4.2. Economic / Industrial Expected Effects

- Cost substitution and cheap introduction / utilization cost of public information system in the public sector
- Strengthen domestic SW industry ecosystem based on open source SW technology for spatial information

To foster the spatial information software industry, to nurture specialized personnel for spatial information software development and to create jobs

	Project name	GeoCMS

2. Development Contents

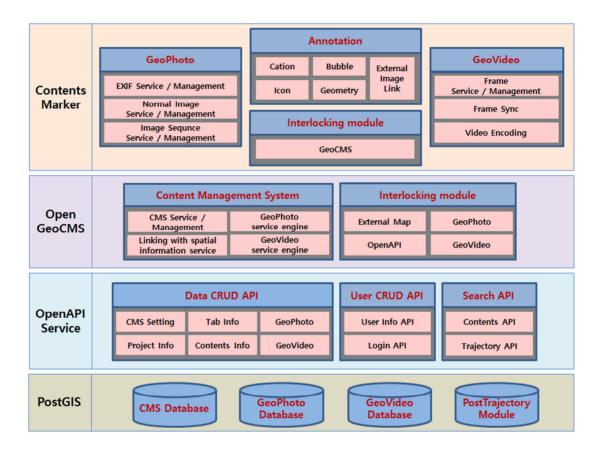

2.1. GeoCMS Operating Environment

Software Information		
operating system	server	Apache Tomcat 6.0
operating dyotom	Client	Chrome 44+
Uniqueness	External map engines (such as GoogleMaps) and Open APIs (such	
(Product activation	as Google Geocoding) should be available. DB:PostgreSQL 9.6	
requirements)		
Hardware Information		
Other environment	2.4GHz, 4	4G RAM, Winows 7

GeoCMS Manual	Project classification	Land Spatial Information Research Project
	Project name	GeoCMS

2.2. System structure

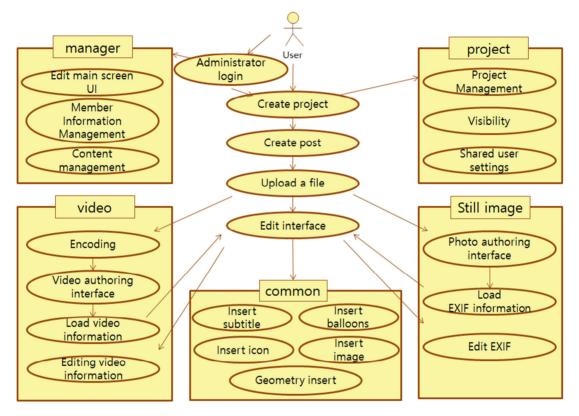

System structure diagram

The GeoCMS platform is divided into authoring function, interworking function, and web service function.

GeoCMS Manual	Project classification	Land Spatial Information Research Project
	Project name	GeoCMS

2.3. Use case

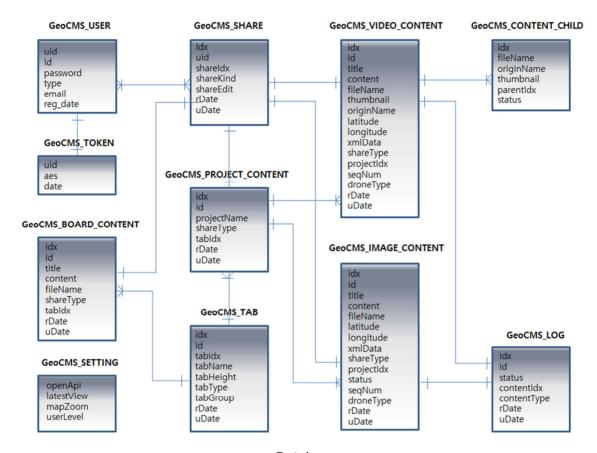

Use case

GeoCMS Manual	Project classification	Land Spatial Information Research Project
	Project name	GeoCMS

2.4. Database

Database

GeoCMS Manual	Project classification	Land Spatial Information Research Project
	Project name	GeoCMS

2.5. XML Schema

 When the photo and video content information is stored in XML and shared, it is composed of the following schema

```
<?xml version="1.0" encoding="UTF-8"?>
<GeoCMS>
 - <obj>
      <id>g</id>
      <top>300</top>
      <left>235</left>
      <xstr>235_391</xstr>
      <ystr> 294_420</ystr>
      linecolor>#ff0</linecolor>
      <backgroundcolor>#FF0000</backgroundcolor>
      <type>rect</type>
   </obj>
 - <obj>
      <id>b</id>
      <top>250</top>
      <left>232</left>
      <href>false</href>
      <underline>false</underline>
      <italic>false</italic>
      <bol><bold>true</bold>
      <fontsize>H1</fontsize>
      <fontcolor>#ffffff</fontcolor>
      <backgroundcolor>#0000ff</backgroundcolor>
      <text>방지턱 입니다.</text>
   </obj>
 - <obj>
      <id>i</id>
      <top>268</top>
      <left>390</left>
      <width>79px</width>
      <height>68px</height>
      <src>/GeoPhoto/images/geoImg/icon/black/d130.png</src>
   </obj>
</GeoCMS>
```

XML Schema

GeoCMS Manual	Project classification	Land Spatial Information Research Project
	Project name	GeoCMS

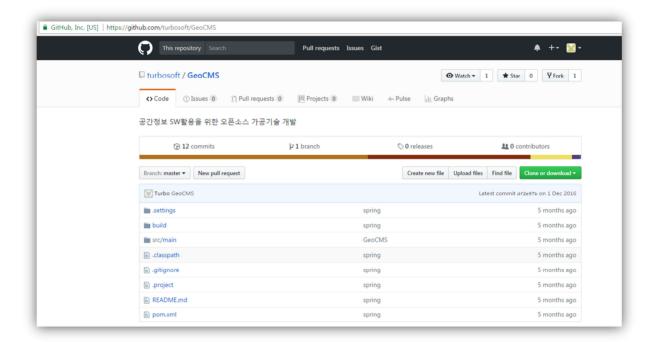

Type	Tag Name	Description
All	GeoCMS	Top-level Tag name
All	obj	Authored Annotation Information Tag
All	id	Annotation ID Tag
All	top	Top Position coordinate value
All	left	Left position coordinate value
Icon	width	Width value of icon
Icon	height	Height value of icon
Icon	src	Src (externally accessible URL) path of the icon
Caption, Bubble	href	External reference link URL path
Caption, Bubble	underline	Underline Attribute value of Text
Caption, Bubble	italic	Italic Attribute value of Text
Caption, Bubble	bold	Bold Attribute value of Text
Caption, Bubble	fontsize	Text size attribute value of Text
Caption, Bubble	fontcolor	Color attribute value of Text
All	backgroundcolor	Annotation background color value
Caption, Bubble	text	User string value
Geometry	xstr	Geometry X Point value
Geometry	ystr	Geometry Y Point value
Geometry	linecolor	Line color attribute value of the geometry
Geometry	type	Type property value of geometry (point, circle, rect)

2.6. How to use GeoCMS

2.6.1. Download source files from GitHub

GeoCMS

https://github.com/turbosoft/GeoCMS

GeoCMS_Gateway

https://github.com/turbosoft/GeoCMS_Gateway

GeoPhoto

https://github.com/turbosoft/GeoPhoto

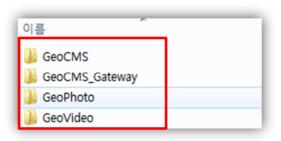

GeoVideo

https://github.com/turbosoft/GeoVideo

GeoCMS Manual	Project classification	Land Spatial Information Research Project
	Project name	GeoCMS

 After decompressing into the webapps folder of Tomcat 6.0, change the folder names to GeoCMS, GeoPhoto, GeoVideo, and GeoCMS_Gateway respectively.

2.6.2. Email and server settings

- GeoCMS/src/main/webapp/WEB-INF/classes/properties/geocms.properties
- GeoPhoto/src/main/webapp/WEB-INF/classes/properties/geocms.properties
- GeoCMS_Gate/src/main/webapp/WEB-INF/classes/properties/geocms.properties
- Specify the server address, port number, server ID, server password, and folder name to store the administrator mail and password and file to send a confirmation e-mail when registering membership, ID and password in the file. (The GeoCMS_Gateway project should only be configured for the server.)

```
email.address=your gmail
email.pass=your gmail Pass

file.serverUrl = file server url
file.portNum = file server port
file.userId = file server id
file.userPass = file server pass
file.saveFilePath = file server path
```

- GeoCMS/src/main/webapp/WEB-INF/jsp/page_common.jsp
- GeoPhoto/src/main/webapp/WEB-INF/jsp/page_common.jsp
- GeoVideo/src/main/webapp/WEB-INF/jsp/page_common.jsp
- Specify the server address and folder name where the files are stored in the

GeoCMS Manual	Project classification	Land Spatial Information Research Project
	Project name	GeoCMS

ftpBaseUrl of the corresponding jsp.

```
var ftpBaseUrl = function(){
   var br = your file server url + "/shares/" + your save file path;
   return br;
}
```

 Administrator email can only be used with Gmail. After logging in, access the following link to turn on Allow less secure apps to use. (Required to use Gmail SMTP.)

https://www.google.com/settings/security/lesssecureapps

2.6.3. Tomcat configuration

- tomcat/conf/web.xml
- Set geoCMSmain.jsp file in welcome-file.

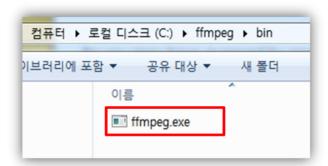

- server.xml
- Set the context to match the path.

GeoCMS Manual	Project classification	Land Spatial Information Research Project
	Project name	GeoCMS

2.6.4. When running GeoVideo

• Download the ffmpeg.exe file from https://ffmpeg.zeranoe.com/builds/ and change the file path.

2.6.5. Create Table

- Create a table using the GeoCMS_DB script.txt file in the GeoCMS folder.
 (PostgreSQL must be installed.)
- geocms_board_content (board table)

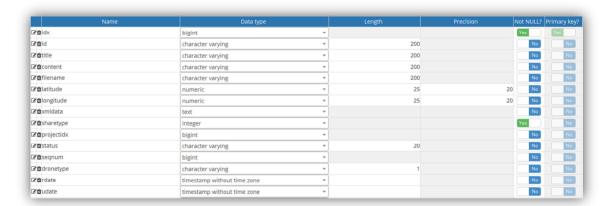

GeoCMS Manual	Project classification	Land Spatial Information Research Project
	Project name	GeoCMS

geocms_content_child (Video subtables)

• geocms_image_content (image table)

GeoCMS Manual	Project classification	Land Spatial Information Research Project
	Project name	GeoCMS

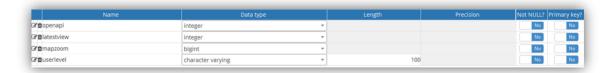

geocms_log (log write table)

geocms_project_content (project table)

geocms_setting (setting table)

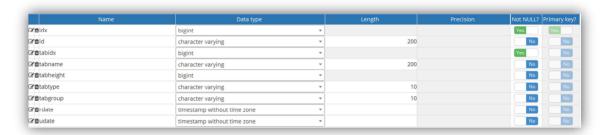

geocms_share (share table)

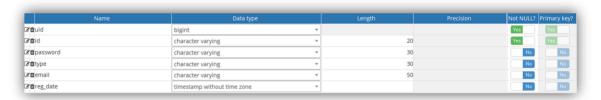

GeoCMS Manual	Project classification	Land Spatial Information Research Project
	Project name	GeoCMS

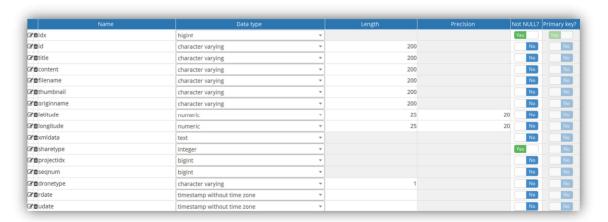

geocms_tab (tab table)

geocms_user (user table)

geocms_video_content (video table)

GeoCMS Manual	Project classification	Land Spatial Information Research Project
	Project name	GeoCMS

• token (token table)

2.6.6. GeoCMS DB Connection Settings

- Change the URL, username, and password in the src / main / webapp / WEB-INF / spring / config / config.properties file of GeoCMS_Gateway to suit your environment.

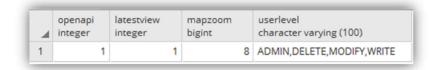

```
jdbc.driver=org.postgresql.Driver
jdbc.url=jdbc:postgresql://localhost:5432/postgres
jdbc.username=postgres
jdbc.password=postgres
```

GeoCMS Manual	Project classification	Land Spatial Information Research Project
	Project name	GeoCMS

2.7. Using the service

- 2.7.1. Setting Table Defaults Before Using the Server
- Add the default value to the geocms_setting table.

Query: insert into geocms_setting values (1, 1, 8, 'ADMIN, DELETE, MODIFY, WRITE');

 When creating an administrator account, add uid, id, pass, type (ADMIN) to the geocms_user table. (type: admin, delete, modify, write, default is MODIFY)

Query: insert into geocms_user (id, password, type, email, reg_date) values ('admin', 'admin1', 'ADMIN', null, now());

Add uid, data to the token table
 The aes key is automatically set and saved at login. (aes: random key for token management)

Query: insert into token (uid, date) values (1, now());
